- ***Shock Pulse Monitoring***
- ***Coolant Analysis***
- ***Condensate Analysis***
- ***Air Quality Analysis***
- ***Summary PM report to keep you informed and document status***
- ***Reduced overall costs via regular and thorough maintenance visits***

We're Not Just Oil Changers...

Times have changed. It used to be maintaining, servicing, and repairing your compressed air system was simply a matter of committing a few labor hours each month.

Today, keeping your system operating at peak efficiency requires thorough knowledge of the technology, and investment in monitoring equipment and ongoing training. These are costs that many industrial companies—even the biggest one—cannot afford.

So, at Thermo King Western Inc. we assume that responsibility for our customers. Our fully-trained service professionals represent the industry's largest investments in ongoing training and equipment.

The result is a responsive and flexible contract maintenance program, guaranteed to keep your compressed air system running at peak performance.
